

Armorize Technologies Attends the Venture Forum.

Strong support shown for new trends in Web Application security

San Jose, Calif.-June 28, 2006- Armorize Technologies, provider of award-winning source code analysis and Web application security solutions, attended Larta Institute's innovation and entrepreneurship showcase to present Armorize's cutting edge technology. The invitation by Larta Institute represented an opportunity for CEO Wayne Huang and COO Matt Huang to develop new relationships with potential clients, investors and partners, as well as share experiences and expertise with other leading innovators.

Armorize's active participation in the event allowed for a working demonstration and explanation of the technology behind its leading source code analysis solution, *CodeSecure™*. This presentation and subsequent communications generated much interest from the primarily Silicon Valley based investors and representatives present at the forum. With four of the top five security innovators at the forum coming from Taiwan, Armorize Technology, with its R&D division based in Taipei, felt right at home and took the lead in exposing the urgent need for more fundamental solutions regarding the development of Web application security.

“The event afforded us the opportunity to assess the potential for development of strategic partnerships, confirm the efficiency and suitability of our adopted business model, and validate a number of the assumptions we had made regarding the security market. In particular, we were able to gain valuable insights into certain market deficiencies which, if addressed, could exhibit strong growth potential.”

-Wayne Huang, CEO, Armorize Technologies.

About the Venture Forum

The Venture Forum is the USA's largest and longest running showcase of top-tier emerging companies. By identifying key trends and inviting leading innovators in those areas to present their innovations, the forum establishes a communications platform between innovators and leaders in the investment arena. Every presentation made by entrepreneurs at the forum has been carefully mentored by Larta Institute, the founders and producers of the forum. For more information please visit:

www.theventureforum.com.

About Larta Institute

Larta Institute is a professional services firm focusing on accelerating the transition of cutting-edge technologies to the marketplace by connecting innovators to investors and companies. For more information please visit: www.larta.org/index.asp.

About Armorize Technologies

Armorize is delivering the world's most advanced source code analysis solution for Web application security. Based on award-winning and patent-pending verification technology, Armorize *CodeSecure*™ proactively identifies and traces security vulnerabilities in Web applications source code, effectively hardening Web applications against the threat of malicious practices.
