▼ **Armorize Technologies to Present at Dow Jones VentureWire Technology Showcase 2008**

Santa Clara, November 07, 2008

Armorize Technologies has been invited to present at the Dow Jones VentureWire Technology Showcase taking place November 18 & 19 in Redwood City, California.

This year's technology showcase features 75 US technology start-ups selected by VentureWire readers and editors as the most innovative and promising in their field. These companies will have the opportunity to demonstrate their technology and business models to potential investors, acquirers and partners.

Armorize CodeSecure™ Ensures Vulnerability-free and Hacker-proof Web Applications

Armorize Technologies is a software security company focused on web application security. Co-Founder and Chief Operating Officer, Matt Huang, will present the business and technology drivers behind the company's flagship product, CodeSecure™.

CodeSecure™ identifies vulnerabilities in web application source code during development in order to prevent hacker attacks. Delivering complex Static Source Code Analysis and Verification technology on a Web-based plug-and-play appliance, this automated solution offers a repeatable and low-cost alternative to manual code review. By ensuring vulnerability-free and hacker-proof web application code from the outset, CodeSecure™ also represents a cost-effective and risk-free alternative to the common build-first secure-later paradigm.

Web application security is a relatively new field, and static source code analysis is at its leading edge. For Armorize, this invitation to present its proactive security technology to business leaders not only validates the need for web application security as a whole but also Armorize's position as a front-runner in this space.

Come see the Armorize Presentation at the Business Technologies Track (Salon 3) at 2.35pm and 3.20pm on November 18. You can also visit our booth at the Focus on Asia Breakfast on November 19th at 7am.

Beyond Source Code Analysis

Having matured CodeSecure™, Armorize is extending its product portfolio towards a holistic model where static source code analysis and verification, dynamic web application firewalls, and malware monitoring solutions are integrated.

Armorize has integrated CodeSecure™ with its SmartWAF™ Web Application Firewall (WAF) and HackAlert™ malware monitoring and detection service. This ensures that Armorize customers can enjoy immediate "hot fix" protection while vulnerable code is rewritten.

About Armorize Technologies

Armorize Technologies provides next-generation Web application security solutions covering the entire System Development Life Cycle (SDLC). From static source code analysis with CodeSecure™, to real-time web application protection with SmartWAF™ and malicious code detection with HackAlert™, Armorize technologies' award-winning solutions are the culmination of years of research and innovation

With deep roots in academia, the Armorize team won two consecutive awards at the prestigious 2003 and 2004 International World Wide Web Conferences, and was invested in by top Silicon Valley investors in 2006. Recognition for innovative technology and business practices since founding include winning the Red Herring Asia 100 award and being named as a Red Herring Global Innovator's Pit Company for 2007.

With its headquarters in Santa Clara, CA, and its R&D center in the Nan Kang Software Park in Taipei, Taiwan, Armorize has a global customer base with clients from among finance, telecom, government and technology sector leaders.
